Carson Drive SE Stormwater and Streetscape Improvements Project

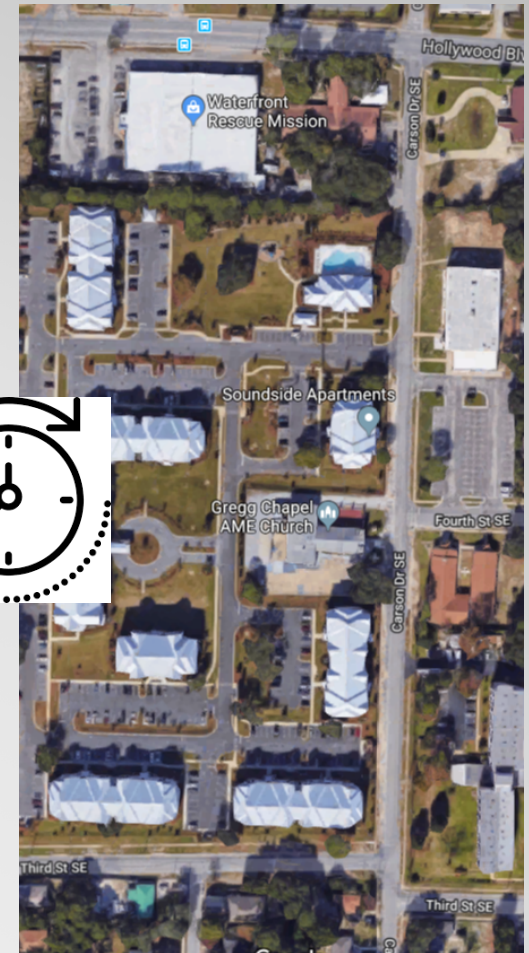

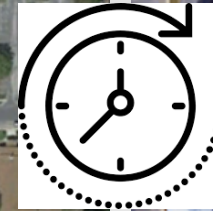

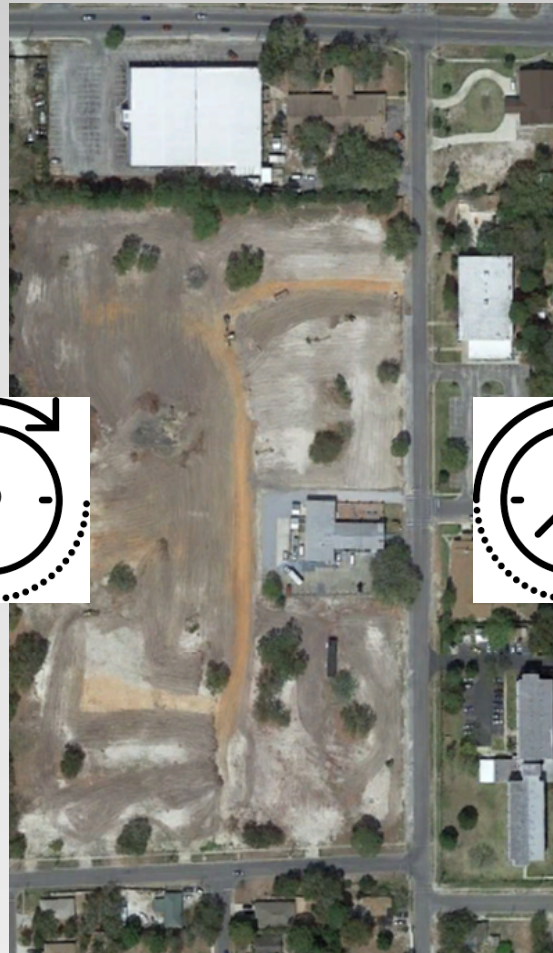

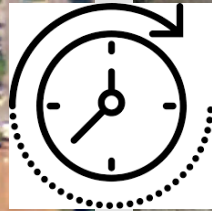

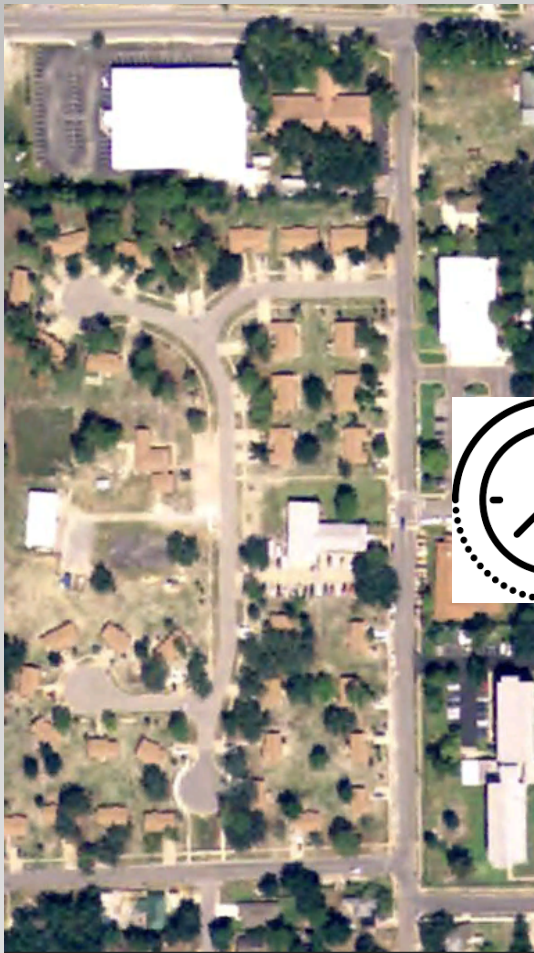

In recent years, the Fort Walton Beach Housing Authority completed a large multi-family housing complex located adjacent to a portion of this project.

Although the housing complex has been successful and has brought an influx of new residents into the community, the adjacent right-of-way was lacking in function and aesthetics.

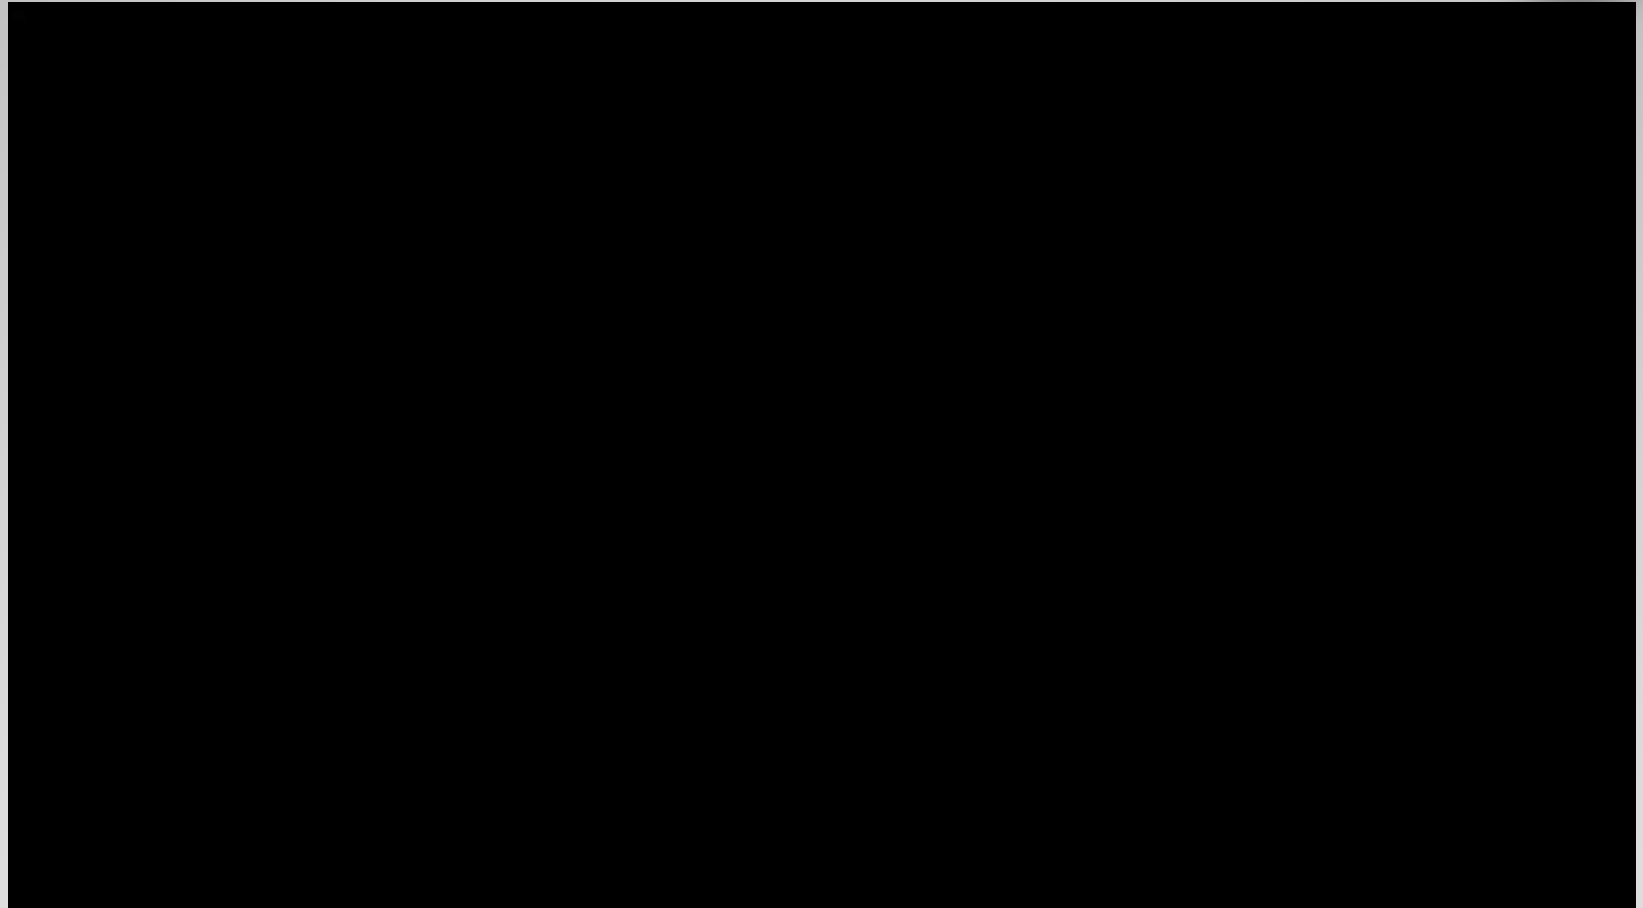

Previous conditions: Ground View

The area served by Carson Dr SE redeveloped, but the road and stormwater infrastructure was not improved

Project Under Way

Project completion

The Carson Drive Project was able to address stormwater system issues in the neighborhood while also being able to address the function and aesthetics of the built environment through new sidewalks, on street parking, street lighting, handicapped access at curbs, and landscaping.

Whether is residents knowing that they can safely walk to school or work, or not having to worry about localized flooding when it rains, these are improvements which can help transform a neighborhood.

The End
